Functional	
Management and Leadership Skills	Project Management

Project

(FLP Project) Cap store   **(Duration) 10 Days**

(Role) Team Leader   *Training Project*

This project is an E-commerce website where customer can do online shopping. It involves three major roles admin, merchant and customer. It has many modules where our team developed managing cart, checking & updating status of delivery, getting transaction details & transaction processing modules.
I handled **Managing Cart** module both frontend and backend.

Frontend:
- The frontend cart page displays all the products with the product information which are added by the customer.
- The customer can purchase the product by clicking on add to cart or buy now. When the customer clicks on add to cart button he/she will redirect to the cart page in which the customer can perform operations like deleting the product and changing the quantity of the product.
- The product can be manually deleted from the cart by the customer when clicks on delete button or it will get deleted automatically when the user purchases the particular product. When the customer clicks on purchase button it will navigate to shipping address page.

Backend:
- The backend involves adding, deleting and updating the products in the database.
- When the customer clicks on add to cart or buy now button new cart id will be generated and the status will get updated as ' added to cart' or 'bought directly' according to the button he/she clicks.
- The cart page retrieves the products details from the cart table by checking the status of the product as 'added to cart'.

- When the customer purchases the product the status of the particular product will get updated as 'confirmed' automatically in the cart table.

Environment: : *Java 8, Spring boot 2.0.4, Rest API and MySql 5.5*

Technologies used : HTML, CSS, Javascript, JSPand Bootstrap

Training

JEE full stack Capgemini FLP training
